

Rekluse Core EXP installation instructions

Note: This is not as recommended by Rekluse – proceed at your own risk.

1. Install Core EXP as per Rekluse instructions but skip the adjustment setup.
2. Install the heaviest wedge springs (gold)
3. Unhook your clutch cable at the engine.
4. Adjust your center adjuster in till it touches the throwout button.
5. Now turn your center adjuster counterclockwise 3 turns.
6. Tighten your lock nuts and finish up your installation.
7. Verify that you have enough clearance between you adjuster and your clutch cover.
8. Hookup your cable.
9. Adjust your clutch cable till there is no free play.
10. Start your engine.
11. Apply very light pressure to the tip of your clutch lever
12. Rev your engine to 5000 rpm
13. Adjust your clutch cable so that the tip of your clutch lever moves about an 1/8 inch.

If you need to push start your quad – adjust your clutch cable to you have free play and use the clutch just like a stock clutch

If you smoke your clutch during a race – shame on you – learn to use the right gear – chuckle to yourself that you now have a new trick in your bag of tricks – repeat step 13 above and continue your race.
